

ABSTRACT OF THE DISCLOSURE

An image printing system using a cellular phone with camera, which offers useful services for a user who possesses a cellular phone with camera but does not have means for easily printing out images taken by the cellular phone. The image printing system using a cellular phone with camera includes a means for connecting a cellular phone with camera to a portrait seal printing machine. Image data of an image taken by the cellular phone with camera is fed into the portrait seal printing machine, and the portrait seal printing machine produces and prints out portrait seals based on the image data.
